HANDOUT 1 OF 4 — OVERVIEW — TAKE THIS ONE

One board for the whole company. No more phone tag at 6:30 a.m.

FieldBoard is a construction management app built by a foreman, for foremen. Your crews open it in the morning and they know where they are going, what they are hauling, and who they are working with — before anyone picks up the phone.

The problem it solves: the job changed in a text thread, the address sits in a spreadsheet, the safety forms live in a binder, and the schedule is on a whiteboard half the crew never sees. When something changes in FieldBoard, it changes in one place — and everyone looking at that job sees the same change.

For the office

Every job, form and message in one system — not scattered across inboxes, spreadsheets and paper.

For the field

The day's jobs, addresses with a map pin, crew and materials — clear and current on a phone.

For every role

Each person sees what their role needs. Your company creates its own roles and decides who sees what.

What changes, day to day

- **Fewer missed details.** Address, crew, materials and status are on the job card — not buried in a message sent last night.
- **Fewer calls to ask what is already known.** People check the board first, because the board is current.
- **Nothing important lives in one person's phone.** Jobs, forms, messages and records stay with the company.
- **New people get up to speed faster.** They open one app and see how the company runs.

Built for any construction company — paving, concrete, base, electrical and more — in the USA and Canada. It runs in a browser on the phones and computers you already have. Nothing to install.

HANDOUT 2 OF 4 — WHAT IS INSIDE

Jobs, safety, forms and messages — together, not in separate systems

Dashboard

Your landing view: today's jobs, weather, crew on site, approvals waiting and more. Each person picks and arranges their own widgets.

Jobs — three views

Jobs: the month calendar. **Summary:** each day grouped by role, with foreman and job number. **Crews:** one day, every crew, one line each. Built for days with 20 to 40 crews out.

Job cards that carry the day

Job number and name, date, address with a map pin, crew names, materials with quantity and unit (tonnes, cubic yards, cubic feet, cubic metres), equipment, notes and photos. Status reads at a glance.

Safety — you build it, your way

FieldBoard is the builder, not a pre-made safety program. Build your own forms once, fill them in the field, sign with a finger — each signature captures a GPS pin and printed name. Signed forms stay read-only, follow-ups are tracked, and certifications flag themselves when expired or expiring.

Custom forms

Build the forms your company actually uses. Pick a job and the form fills in the job number, name, address and foreman automatically, then sends the completed form to the right role in Messenger.

Messenger & pings

Message inside FieldBoard instead of personal texts. Send a ping when something needs attention, and schedule pings — including repeating ones.

Equipment & Job Database

See each unit's current job, address and next job, search by unit number, and keep every job your company does in one searchable database — reused, not retyped.

People, News & Analytics

A people directory with privacy choices for phone and email, company news posted to the roles you choose, and a build-your-own chart builder for tonnage, jobs and form activity.

One login, one place. A foreman should not need five apps, three spreadsheets and a binder to run one day's work.

HANDOUT 3 OF 4 — BUSY DAYS & PRICING MODEL

40 crews out today? See every foreman at every job in one glance.

Most boards turn into a wall of text on a busy day. FieldBoard was built for that day.

View	What you see
Summary	The whole month, grouped by your company's own roles. Each day lists the foreman and job number under each role — for example, your base crews at six jobs, paving at four, concrete at two.
Crews	One day on one screen: one line per job with foreman, job number, address and status, grouped by role with counts. Tap any line to open the job.
Jobs	The familiar month calendar, one chip per job — best when only a few crews are out.

The groups are never hardcoded. They are the roles your company creates in Team & Roles, so the board matches how your company actually runs.

One flat rate per company. Unlimited users.

Per-user pricing

Every new hire raises the bill. Companies think twice before adding a crew member, a supervisor or a seasonal hand — and the people who most need the board are the first ones left off it.

FieldBoard

One yearly rate for the whole company. Add 5 people or 50 — the price does not change. Everyone who needs the board gets the board.

- **What is included:** jobs, crews views, safety builder, custom forms, Messenger and pings, equipment, people, news, analytics, and your company branding on your board.
- **Setup:** set up manually, company by company — your roles, your forms and your branding, configured with you.
- **Your price:** provided in writing after a short scoping conversation, so the number you get is the number for your company — no surprises and no per-seat maths.

Ask it plainly: how many calls does your dispatcher make in a morning just to tell people where to go? FieldBoard answers that question before anyone picks up the phone.

HANDOUT 4 OF 4 — START WITH A PILOT

Start small. Prove it on real jobs. Then roll it out.

A pilot looks like this

☐ Pick a few foremen and one busy week

☐ We set up your company board: your roles, your branding

☐ You build your first safety and job forms, your way

☐ Crews run real jobs on the board for that week

☐ We review together: what worked, what to adjust

☐ You decide on a full rollout — no pressure either way

Questions we hear

Do our guys need to install anything?
No. It runs in a browser on phones and computers you already have.

Is our safety program included?
No — on purpose. FieldBoard gives you the builder so you create your own forms, exactly the way your company works.

Can different roles see different things?
Yes. Admin is the only built-in role. Every other role is created by your company, with its own permissions.

More answers

What about GPS tracking for equipment?
Equipment tracking by job is in the board today. Live GPS hardware integration is in development — ask us for the current status for your fleet system before counting on it.

What does it cost?
One flat yearly rate per company, unlimited users. Your written price follows a short scoping conversation.

Who is behind it?
Built by a working foreman and currently in live beta, tested daily by a real paving company. You deal directly with the builder — not a call centre.

Your next step

Book a demo or a pilot start date. Fill this in together:

_____

_____

_____

Name · Company · Best phone or email · Demo / pilot date

Stop the chaos. One board, every crew, every job — FieldBoard. Book your demo today.
